User can also tap on this icon to fork some special comments save the post with these comments.

Prioritization

GTM Strategy

User Research

- Conduct user research to understand the user journey while they use the app and understanding in which feature churn is more.
- Ask user to rate the app and give suggestions.
- Study about our competitors to understand about their offerings.

Feature Development

- After understanding users' needs and pain points, ideate the solutions while empathizing with the users.
- Incorporate user feedback, develop solutions & ensure it is aligned with user expectations.
- Plan a roadmap to prioritize, track and launch the features.

Beta Testing

- Once MVP features are built, it should be made available to some of the users.
- After sometime, collect all the inputs and make improvements as needed.
- Make sure to fix any remaining issues and fine-tune our product.

Launch & Monitoring

- As this is a new feature, users should be informed about it through a tutorial as soon as the feature is launched.
- Monitor user adoption, engagement, track key metrics and try to improvise further based on user feedback.
